Question 1

Correct

Mark 5.00 out of 5.00

Flag question

You are given a `rows x cols` matrix `grid` representing a field of cherries where `grid[i][j]` represents the number of cherries that you can collect from the `(i, j)` cell.

You have two robots that can collect cherries for you:

- **Robot #1** is located at the **top-left corner** `(0, 0)`, and
- **Robot #2** is located at the **top-right corner** `(0, cols - 1)`.

Return *the maximum number of cherries collection using both robots by following the rules below:*

- From a cell `(i, j)`, robots can move to cell `(i + 1, j - 1)`, `(i + 1, j)`, or `(i + 1, j + 1)`.
- When any robot passes through a cell, It picks up all cherries, and the cell becomes an empty cell.
- When both robots stay in the same cell, only one takes the cherries.
- Both robots cannot move outside of the grid at any moment.
- Both robots should reach the bottom row in `grid`.

For example:

Test	Result
ob.cherryPickup(grid)	24

Answer: (penalty regime: 0 %)

Reset answer

```
1
2 class Solution(object):
3     def cherryPickup(self, grid):
4         ROW_NUM = len(grid)
5         COL_NUM = len(grid[0])
6         dp = [[[float('-inf')]] * COL_NUM for _ in range(COL_NUM)]
7         dp[0][0][COL_NUM - 1] = grid[0][0] + grid[0][COL_NUM - 1]
8         for i in range(1, ROW_NUM):
9             for j1 in range(COL_NUM):
10                for j2 in range(COL_NUM):
11                    curr_cherries = grid[i][j1]
12                    if j1 != j2:
13                        curr_cherries+=grid[i][j2]
14                    for prev_j1 in range(j1 - 1, j1 + 2):
15                        for prev_j2 in range(j2 - 1, j2 + 2):
16                            if 0 <= prev_j1 < COL_NUM and 0 <= prev_j2 < COL_NUM:
17                                prev_cherries = dp[i - 1][prev_j1][prev_j2]
18                                dp[i][j1][j2] = max(dp[i][j1][j2], curr_cherries + prev_cherries)
19
20         return max(0, dp[ROW_NUM - 1][0][COL_NUM - 1])
21
22
```

	Test	Expected	Got	
	ob.cherryPickup(grid)	24	24	

Passed all tests!

Correct

Marks for this submission: 5.00/5.00.

Question 2

Correct

Mark 5.00 out of 5.00

Flag question

Create a python program to for the following problem statement.

You are given an $n \times n$ grid representing a field of cherries, each cell is one of three possible integers.

- 0 means the cell is empty, so you can pass through,
- 1 means the cell contains a cherry that you can pick up and pass through, or
- 1 means the cell contains a thorn that blocks your way.

Return the maximum number of cherries you can collect by following the rules below:

- Starting at the position (0, 0) and reaching (n - 1, n - 1) by moving right or down through valid path cells (cells with value 0 or 1).
- After reaching (n - 1, n - 1), returning to (0, 0) by moving left or up through valid path cells.
- When passing through a path cell containing a cherry, you pick it up, and the cell becomes an empty cell 0.
- If there is no valid path between (0, 0) and (n - 1, n - 1), then no cherries can be collected.

For example:

Test	Result
obj.cherryPickup(grid)	5

Answer: (penalty regime: 0 %)

Reset answer

```
1 class Solution:
2     def cherryPickup(self, grid):
3         n = len(grid)
4         ### add code here
5         dp=[[-1]*n for _ in range(n)] for _ in range(n)]
6         def f(x1,y1,x2):
7             y2=x1+y1-x2
8             if x1<0 or y1<0 or x2<0 or y2<0 or grid[x1][y1]==-1
9                 return float('-inf')
10            if x1==0 and y1==0 and x2==0 and y2==0:
11                return grid[0][0]
12            if dp[x1][y1][x2]!=-1:
13                return dp[x1][y1][x2]
14            cherries=grid[x1][y1]
15            if x1!=x2 or y1!=y2:
16                cherries+=grid[x2][y2]
17            cherries+=max(
18                f(x1-1,y1,x2-1),
19                f(x1,y1-1,x2-1),
20                f(x1-1,y1,x2),
21                f(x1,y1-1,x2))
22
```

	Test	Expected	Got	
	obj.cherryPickup(grid)	5	5	

Passed all tests!
